CYBERNET MEDICAL EASES REMOTE MANAGEMENT OF HEALTHCARE PATIENTS

New Cybernet MedStar™ Kits Include Peripheral Components Giving Customers a Single Outlet for Purchasing Comprehensive Health Data Management Systems

Ann Arbor, MI – February 23, 2004 – Cybernet Medical, a leading developer of biometric monitoring technology and medical devices for outpatient care, today announced the availability of a new wound care camera and three new mobile monitoring MedStar™ Kits – the CHF MedStar Kit (congestive heart failure), COPD MedStar Kit (chronic obstructive pulmonary disorder), and the Diabetes MedStar Kit. Delivered in a pre-wired and pre-configured portable service case for easy transport and use, the new MedStar kits include all the technology necessary for the remote acquisition and management of patient health data, including peripheral measurement components such as a blood pressure cuff or the new wound care camera.

“One of our main objectives when offering telemedicine technology is to make the entire process as simple and easy as possible. In the past, we’ve supplied our customers with the technology for managing and transferring patient data, but relied on third party vendors to deliver the measurement components such as a spirometer or pulse oximeter,” said Chuck Jacobus, Ph.D., CEO of Cybernet Medical. “With our new MedStar Kits, we’ve included these peripheral components, which we believe will help reduce the amount of leg-work customers are required to do before deploying our systems.”

The MedStar interface device and accompanying collection server, together called the MedStar System, is designed to improve in-home patient chronic disease management. Purpose-built for home care, hospitals and disease management companies, the MedStar device and its web-based electronic patient record management system is a low cost solution for transmitting data acquired in the patient's home to remotely located caregivers.

All MedStar Kits include a special pre-wired / pre-configured MedStar portable service case, cables and accessory items, a guide to operations, a one year manufacturer’s warranty, and Monday - Friday, 9:00 AM – 6:00 PM EST standard customer support.

Congestive Heart Failure Mobile Monitoring Kit

- MedStar 200
- Blood Pressure Monitor
- Scale
- SV500 Pro XL Videophone
- Wound Care Camera

Chronic Obstructive Pulmonary Disorder Mobile Monitoring Kit

- MedStar 210
- Blood Pressure Monitor
- Scale
- Pulse Oximeter
- Spirometer
- SV500 Pro XL Videophone
- Wound Care Camera

Diabetes Mobile Monitoring Kit

- MedStar 300
- Blood Pressure Monitor-
- Scale
- Glucose Meter
- SV500 Pro XL Videophone
- Wound Care Camera

About Cybernet Medical

Cybernet Medical is an innovative, technology-based company focused on changing the way chronic care patients are monitored and diagnosed. Through research funded by NASA, National Institutes of Health and the Defense Advanced Research Projects Agency (DARPA), Cybernet Medical has developed and patented electronic devices, networked databases, and web-based user interfaces for the collection and management of physiological data. For more information on Cybernet Medical, visit the company's web site at www.cybernetmedical.com or call 734-668-2567.
