**Cybernet Medical to Participate in Disaster Response Demonstration at the American
Telemedicine Association Annual Conference**

*Cybernet's MedStar to be showcased in a demonstration of civilian and military telemedicine
applications used in disaster response*

WHO: Cybernet Medical, a leading developer of biometric monitoring technology and medical devices for outpatient care

WHAT: Cybernet Medical will showcase its MedStar™ Disease Management Data Collection System throughout the American Telemedicine Association's annual conference May 2-5, 2004. Its latest product, the MedStar Kit, is a key component in the conference's new Medical Disaster Response Demonstration (MEDRED) on Tuesday, May 4, 2004. MEDRED is a unique exercise designed to illustrate the feasibility of telemedicine technologies to work in conjunction with the American Red Cross, the public health system and local/regional service providers in a disaster scenario that theoretically poses a threat to a wide, heavily populated area. Cybernet's MedStar Kit, a self-contained pre-wired and pre-configured collection of equipment for the remote acquisition and management of patient health data, will be in MEDRED's simulated home environment as a health monitoring technology.

The MedStar System provides in-home monitoring of biometric data and supports high-resolution camera output and two-way communication. Cybernet Medical representatives will be available throughout the show to provide attendees with a live demonstration of the entire patient monitoring process by collecting and transmitting human physiological data into a simulated electronic patient record for retrieval and analysis.

WHEN: ATA Conference, May 2-5, 2004
MEDRED will be held Tuesday, May 4, 2004

WHERE: ATA 2004 Ninth Annual Meeting & Exposition
Booth #707
Tampa Convention Center, Tampa, FL

About Cybernet Medical

Cybernet Medical is focused on changing the way chronic care patients are monitored and diagnosed. Through research funded by NASA, National Institutes of Health and the Defense

Advanced Research Projects Agency (DARPA), Cybernet Medical has developed and patented electronic devices, networked databases, and web-based user interfaces for the collection and management of physiological data. For more information on Cybernet Medical, visit the company's web site at www.cybernetmedical.com or call 734-668-2567.
