Cybernet Medical Announces Lowest Comprehensive Telehealth Monitoring Costs

Ann Arbor, MI – August 25, 2005 – Cybernet Medical, a leading developer of electronic record keeping and biometric monitoring technology supporting outpatient care, today announced that they will offer their award winning MedStar™ System for as little as \$42 per patient per month. The MedStar System is available for purchase, lease or rental, and Cybernet Medical is dedicated to being the lowest cost supplier of remote monitoring devices in the industry.

To showcase that dedication, Cybernet Medical is offering to provide the MedStar System at a lower price than any alternative system. “The medical industry is already squeezed financially supporting chronically ill patients, and MedStar home monitoring alleviates some of this pressure, while improving patients’ outcome,” says Dr. Charles J. Jacobus, President of Cybernet Systems Corporation. “Avoiding one day of unnecessary hospitalization pays for almost 3 years of monitoring expenses.”

The MedStar system supports blood pressure, weight, glucose, pulse oximetry, spirometry, temperature and PT/INR monitoring. The system also includes a web-based electronic medical record, an interactive voice response system for contacting patients with subjective questions, automatic report generation and faxing, and free quarterly updates and customization services.

About MedStar™

The MedStar interface device and accompanying web-based electronic patient record is designed to improve in-home patient chronic disease management while reducing the expense of providing it. MedStar is designed for home care, hospital and disease management situations, providing a low-cost solution for moving physiological data

acquired in the patient's home to remotely located caregivers. Using MedStar devices paired with Cybernet Medical's web-based electronic patient physiological data record management systems, home and health care providers can deliver better care at lower cost and free up resources to care for more seriously ill patients.

About Cybernet Medical

Cybernet Medical is focused on using the Internet to improve the way chronic care patients are monitored and diagnosed. Cybernet Medical is a division of Cybernet Systems, a research and development firm based in Ann Arbor, Michigan. For more information on Cybernet Medical and the MedStar System, visit the company's web site at www.cybernetmedical.com or call 1-800-CYBERNET.
