Cybernet Systems' NetMAX Division to Showcase New Internet Appliance and Network Server Software in Partner Pavilion at HP World 2004

WHO: Cybernet Systems' NetMAX Division, a leading developer of Linux Internet appliance and enterprise network server software for business and the resellers serving those markets.

WHAT: Cybernet Systems will showcase its entire line of NetMAX Linux Internet appliance and enterprise network server software solutions at its booth (#747) in the HP World Partner Pavilion during HP World 2004.

A recent member to the HP Partner Program, Cybernet's NetMAX enterprise solutions are now available prepackaged with HP servers. NetMAX is an Enterprise Linux Server software distribution that supports: PC/Mac/Unix file sharing, e-commerce, web traffic, desktop, security, gateways and wireless access. This collaborative effort offers customers and resellers an easy-to-use, powerful and inexpensive plug-and-play appliance for deploying and administering secure wireless access points, e-mail and file servers, VPN systems, and managed security. NetMAX costs less to own and reduces Linux support costs.

At the Cybernet booth (#747), the company will offer product demos of the new NetMAX Professional 5.0, scheduled for release in early September 2004. Based on Red Hat and designed to offer SMBs and resellers a robust, full-featured server for Apple/PC/Unix file sharing, e-mail, web page serving, firewall security and more, the new product includes dramatic enhancements to security and performance, and further simplifies deployment and management capabilities.

WHEN: HP World 2004, August 17-19, 2004

WHERE: HP World 2004
Booth #747
