

## Cybernet Systems Creates Retail Pack with UseYourHead™ Software and USB PC Camera

### Easy to Use Gesture Recognition Software Now Available with Required Camera for Interactive PC Gaming Experience

**Ann Arbor, Michigan, December 14, 2000** - Cybernet Systems today announced the general availability of UseYourHead Plus, a retail pack that combines Cybernet's landmark gesture recognition technology software, UseYourHead™ with a USB PC digital camera by Dolphin Peripherals, makers of the innovative 007 digital pocket camera. The combination pack makes it easier for PC gamers who presently don't own a USB PC camera to immediately install and enhance their game play experience with UseYourHead software.

"Putting UseYourHead with Dolphin's iCAM USB digital camera creates an all-in-one PC gaming enhancement package that's convenient for the customer," noted Anthony Comazzi, vice president of business development at Cybernet Systems. "Many PC game players may not already own a USB PC camera, which is required - along with UseYourHead software - to use your head as an additional game command device. UseYourHead Plus provides users with all of the components in one retail box to start having more fun playing a variety of PC games."

The UseYourHead Plus pack includes the USB (digital) iCAM from Dolphin Peripherals, which has a 100K CMOS image sensor supporting a resolution of 352 X 288 (CIF) and processes up to 30 frames per second. It is the first time a Dolphin Peripherals product has been integrated as a part of a complete retail solution, although the company has several OEM products marketed under other brand names.

"The iCAM camera is a perfect match for Cybernet's innovative software," said Dolphin Peripheral's chairman Todd Waldman. "Packaging UseYourHead with one of our web cams provides us with a unique opportunity to be a part of an exciting new technology."

UseYourHead Plus is being distributed by Macmillan USA to retail outlets throughout the U.S. for a street price of \$79.99, which includes a limited time rebate offer.

#### **About UseYourHead**

UseYourHead is a program that works in conjunction with a USB PC digital camera to track a player's head movements, translating these movements into game commands. For instance, when using the software with a flight simulator program your head movements command the plane up, down, left and right, freeing your hands for other keyboard commands. Using one's head as an additional game command device adds an exciting new dimension of fun to playing PC games such as flight simulation, adventure, children's, edutainment games, and first and third person shooter games.

## **About Cybernet**

Cybernet Systems Corp. is a profitable, rapidly growing technology-based company focused on developing products that combine software and Internet intelligence with human-machine interaction. Cybernet has successfully leveraged its wealth of intellectual property to bring force feedback technology to market in the form of game controllers and joysticks, and introduced the first Linux-based Internet appliance software. The company continues to innovate in the areas of Internet medical systems, large-scale distributed network training and gaming and gesture control interface technology.
